

## GENERAL INFORMATION

<b>Parameter name</b>	Land surface temperature
<b>Name of the layer in EGDI Map Viewer</b>	Land surface temperature, Linköping
<b>Original name of the layer uploaded to EGDI database</b>	PP11_SGU_land_suface_temp
<b>Category</b>	<a href="#">Resources for closed-loop systems</a>
<b>Definition</b>	<a href="#">Temperature of the land surface on the top canopy layer</a>
<b>Harmonized unit</b>	°C
<b>Relevance for shallow geothermal energy</b>	Mean annual surface temperature derived from infrared satellite data. If available, these datasets are calibrated and validated by soil temperature measurements.
<b>Data type</b>	Continuous data layer
<b>Data format</b>	Raster
<b>Projection</b>	EPSG: 3034
<b>Dataset selected for pilot area</b>	Bratislava, Vienna, Zagreb, Prague, Cork, <b>Linköping</b> , Ljubljana, Brussels, Girona

## ATTRIBUTES

<b>Unit</b>	°C

### Explanatory text English

Average annual ground temperature based on the map shown on the SMHI website. The grid does not include digital data from the source Swedish Meteorological and Hydrological Institute (SMHI). Instead, the grid has a constant value of 6 degrees C, which can be observed to be representative for the target area based on the map shown on the SMHI website.

### Explanatory text national language

Language	Swedish
----------	---------

Kartan visar markytans medeltemperatur baserat på kartdata från Sveriges meteorologiska och hydrologiska institut (SMHI). Små regionala skillnader och ett glesa observationer gör att 6 grader är representativt för större delen av området runt Linköping.
